Powerful, Effective Protection Against Viruses and Malware

STOPzilla AntiVirus 8.0 gives you an active layer of protection against viruses and malware. Our unique architecture finds and removes even the most complex threats.

Will Not Slow Computers Down
STOPzilla AntiVirus will not significantly slow down your computer. It has been designed to have minimal impact on system resources.

Complete Cleanup of Infected Machines
Unlike most software that only attempts to prevent new threats, STOPzilla AntiVirus was made to destroy existing threats you may already have.

Easy on the Eyes, Easy to Use
STOPzilla AntiVirus provides you with a hassle-free experience. It is extremely intuitive and straightforward for even non-technical users and features an updated interface.

Supported in the USA
STOPzilla AntiVirus is 100% supported by our employees in the USA who take personal pride in delivering a top-quality product to you, with the best service possible.
Active Protection
STOPzilla AntiVirus 8.0 detects viruses and malware in real-time before it is even saved to the hard drive. Preventative, faster detection than previous versions provides the broadest possible coverage against malicious threats.

Web Filter
STOPzilla AntiVirus’s smart Web Filter is a cloud based URL scanning utility that is updated with newly discovered threats every 5 seconds, protecting you from malicious websites that steal end-user information.

Threat Removal
STOPzilla AntiVirus quickly and easily removes threats through our Quick, Full, Custom or Scheduled scans. Plus, our device control feature ensures that all files stored on external drives don’t pose a threat to your computer.

Enhanced Malware Detection Engine
With one of the most extensive virus and malware databases in the industry, STOPzilla AntiVirus scans deeper and more thoroughly than other security products. It can find and eliminate threats that other products fail to detect and leave behind.

Application Whitelist
Allows you to mark certain installed applications as safe and should therefore not be considered malicious. This is especially useful if you have custom software that you are absolutely certain is harmless and should be allowed to function normally.

Rootkit Scanning
Rootkits avoid normal methods of detection by placing themselves between the operating system and the AntiVirus/AntiMalware software. STOPzilla AntiVirus recognizes Rootkits before they can infect your computer and eliminates them completely.

Minimum System Requirements
• CPU: Intel Pentium 1.0 GHz or faster
• Hard Drive: 1 GB of free space
• Memory: 512 MB of RAM

Recommended System Requirements
• CPU: Intel Pentium 2.5 GHz or faster
• Hard Drive: 5 GB of free space
• Memory: 1 GB or more of RAM

I wanted to personally thank you for your time and effort last night in solving my virus problem with STOPzilla. I have run several STOPzilla scans and they are all coming up clean. My computer is now working properly. Thanks for your assistance and the great customer support.
